

Se construiește trapezul înălțat ABCD,  $AB \parallel CD$ :  $a, c, e, f$   
 $|AB| = a, |CD| = c, |AC| = e, |BD| = f$

nepolohova: inițial am construit  $AB, |AB| = a$

$\triangle AEC$ :  $\text{csc}$ ,  $|AE| = a + c$

$|AC| = e, \Rightarrow C \in k(A, e)$

$|EC| = f \Rightarrow C \in l(E, f)$

$DC \parallel AB \Rightarrow D \in p, p \parallel AB, C \in p$

$|DC| = c \Rightarrow D \in m, m(C, c)$

ii)

1.  $AB, |AB| = a$

2.  $E, E \in \text{ext} AB, |AE| = a + c$

3.  $k, k(A, e)$

4.  $l, l(E, f)$

5.  $C, C = k \cap l$

6.  $p, p \parallel AB, C \in p$

7.  $m, m(C, c)$

8.  $D, D = m \cap p$

9.  $\square ABCD$

Podmuniung mîmî de lungimi  
 + distanța  $x$ :

$$a + c < e + f$$

$$e < a + c + f$$

$$f < a + c + e$$
